Inmote is a leading software development company specialized in device creation for telecom, automotive, consumer electronics and healthcare. We have a proven track record of delivering high quality solutions, services and training to meet the demanding needs of leading hardware manufacturers and service providers across Europe.

Always nearby: high quality, reduced cost & time.

Inmote has the unique ability to deliver both embedded software, server and backoffice integration with a local, dedicated team in the Netherlands or in Germany. Consequent face to face meetings with the assigned developer can be easily arranged at any location within the EU. All developers are fluent in English, in spoken and written word. Most are native Dutch speakers and have a fair knowledge of German.

To us, clear communication is key for a successful project. We always do extensive research on the domain and emphasize on clear understanding of the project.

Using a dedicated team, domain knowledge and skills are retained and strengthened within the team. The assigned team works exclusively for the client and remains under supervision of the client. Inmote recommends having a lead developer directly on the client site to ensure seamless liaison with the client.

Inmote is involved in highly complex multi-site international projects which include delivery of proof of concepts, computer vision, secure VOIP and SIPS solutions and the development of customized Android ROM images.

Inmote makes use of agile development techniques, including scrum, which ensures continuous availability of working release versions of each product.

Inmote has been entrusted by major players to bring their software developments from concepts to reality. Independently owned, and platform agnostic, we focus on the optimal solution for our customers, not on proprietary platforms.

Outsource your complete project to us, or augment your team with Inmote expertise in the areas you choose. We can provide services per fixed bid, time & materials, monthly rate or hybrid pricing model.

Starting with a proposal and detailed project description, Inmote can design, develop, test and support your next embedded device software needs. The effective and positive project completion and our customer success are always our highest priority.

Services

- R&D proof of concept
- Software development
- User interface design
- Platform integration
- Testing and hardening

Expertise

- C, C++, C#, Java, Qt, WxWidgets
- Mobile: Android, iOS, BB10, Linux, WP8
- HTTP(S), Bluetooth, Wi-Fi
- VOIP / SIP, RTP (PJSIP, OPENSIPS)
- Codecs: H.264, H.263, AMR
- Sensing, encryption
- Computer Vision (OpenCV)
